

Team Name: sdmay21-23

Team Members: Karthik Prakash, Justin Merkel, Abir Mojumder, Patrick Wenzel, Zhi Wang, Abhilash Tripathy

Report Period: Oct 19-Oct 25

Summary of Progress in this Period

In the past week, our team has met to go over finishing our second version of the design document, making our lightning talk presentation and preparing to present that to the class in the upcoming week, and we also started making a hello world application. In this application, we welcome the user to the application, provide a link to our team's website, and a machine learning model that tries to predict stock prices over the next couple of months. We have also started to try and set up a docker container for our application.

Pending Issues

- Figuring out how to set up docker containers for our project.
 - How to do this more efficiently
 - Develop ML algorithm for power grid data
-

Plans for Upcoming Reporting Period

- Team members adding bios to the team website
- Continuing to add onto our hello world application
 - Add more complex components
 - Customize the design of the page more
 - Add different pages to the application
- Work on end of semester presentation
